

AsiaSat provides complete, end-to-end solutions for a diverse range of maritime segments. Our maritime services are available through our extensive coverage over major shipping routes, managed hub, terrestrial connectivity, professional engineering support and system integration, with data rate plans and antenna bundled packages customised to serve maritime operation, crews and passengers at affordable price.

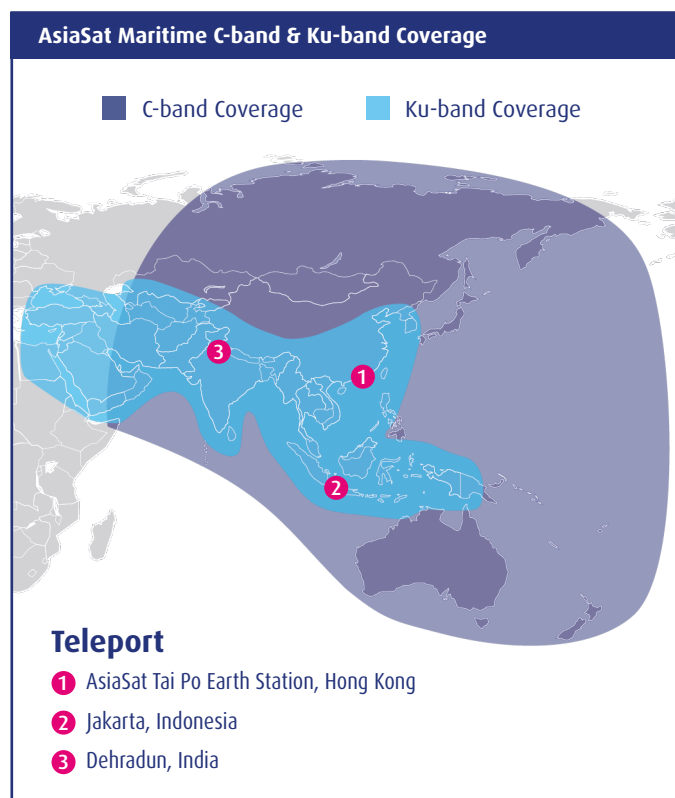

Resilient & Secure Connectivity

- Asia-Pacific-wide maritime coverage enabled by our wholly-owned satellite fleet, world-class ground infrastructure and teleport facilities
- Full range of value-added services including economical and easy to install maritime terminals
- Flexible data rate plans and contractual terms
- High level of quality service and connectivity solution for data, video, voice, satellite TV, vessel tracking, IoT and other service applications

Why AsiaSat?

- One-stop, end-to-end connectivity solution
- Wide-ranging capacity options over major sea routes
- High-powered Ku-band beams with overlapping coverage to enable seamless handover of communication in motion
- Cross-strap beam switching capability for flexible and extended coverage
- Region-wide C-band coverage
- Senior orbital slot filings allowing use of smaller antenna for optimal performance
- Proven experience in supporting maritime service providers
- High service reliability to support critical communications
- Professional operational and engineering team
- Dedicated 24/7 customer service
