

SAILAS is a cutting-edge, fully managed connectivity service designed to deliver high-speed connectivity and global coverage for a diverse range of maritime segments.

At the heart of SAILAS's offering is a secure and reliable infrastructure that integrates GEO and LEO services with 4G LTE/5G capabilities, complemented by L-band for enhanced resiliency. This seamless integration ensures smooth operations for shipping companies while improving crew welfare and passenger services.

Users can access a self-service portal that provides a unified solution for all connectivity needs, including tracking vessel locations, monitoring bandwidth usage, and enjoying onboard entertainment through SAILAS TV and other value-added services.
