

At the heart of SAILAS's offering is a secure and reliable infrastructure - SAILAS Plus - that integrates GEO and LEO services with 4G LTE/5G capabilities, complemented by L-band for enhanced resiliency. This seamless integration ensures smooth operations for shipping companies while improving crew welfare and passenger services.

SAILAS users can access an all-in-one portal that provides a unified solution to address all connectivity requirements, including real-time vessel location tracking, bandwidth usage monitoring, and access to onboard live TV through SAILAS TV, and other value-added services.
